

# Develop State/NOAA Coordination and Technical Support

## October 1997 Update

---

There were a total of six ACTIONS identified at the 6/18-19/97 Meeting of the Working Group. These are:

- 1) The Coastal County Emergency Managers posted to the Web Page are to be reviewed and any updates provided via "tsuhaz" ACTION: The States No changes/corrections were received to all CCEMS are presumed to be correct.
- 2) Copies of the handouts used in the WCM training were to be supplied to members of the Group. ACTION: NWS- Hutcheon DONE
- 3) It was suggested that WCMs might be effectively involved in the development of local evacuation plans. ACTION: States - continuing
- 4) It was the opinion of the Group that the WCMs should be added to "tsuhaz." Hagemeyer queried them as to whether they wanted all to get everything or whether one WCM should receive all and filter what goes to the rest. There was no response so the request was reinstituted on 10/8/97. ACTION: NOAA-PMEL in suspense
- 5) It was noted that not all members had received the distribution of EMWIN information and another distribution was requested. ACTION: NWS-Hagemeyer DONE
- 6) It was agreed that the feasibility of using EMWIN for the distribution of earthquake information should be explored. ACTION: NWS - Hagemeyer

The feasibility testing was approved by NWS Headquarters and the NWS Western Regional Director. The MIC, WSFO Seattle, and Craig Weaver were so notified. No progress report available.
